In fiscal year 2016-2017, Michigan State University received...

- $100 million from the U.S. Department of Energy for the Facility for Rare Isotope Beams, which will deliver the highest intensity beams of rare isotopes available anywhere in the world;
- An additional five years of funding from the U.S. Department of Energy for the Great Lakes Bioenergy Research Center, in which MSU is a major partner, to develop sustainable alternatives to transportation fuels and other products currently derived from petroleum; and
- Over $27 million from the National Institutes of Health, Centers for Disease Control, Substance Abuse and Mental Health Services Administration and other health agencies and foundations, to develop new models for public health, while serving that community.
